ANNEX A.2 CADT Beneficiaries Household Survey**Background**

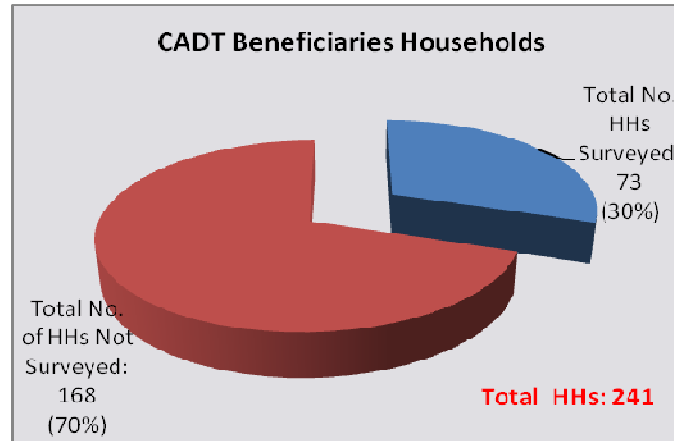

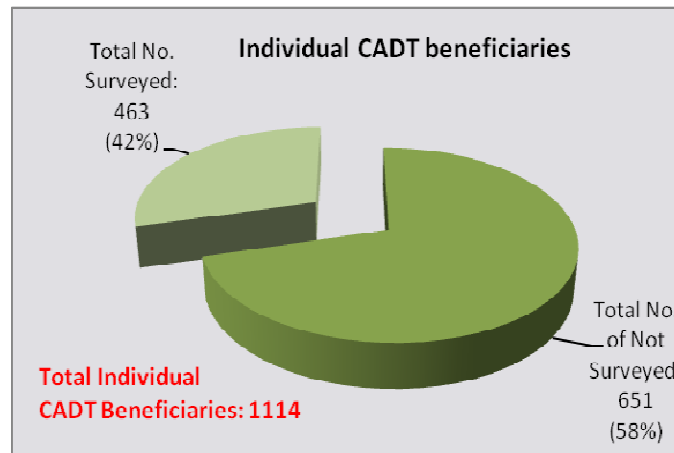

On May 7 to 26, 2007, TVIRD, through its Community Relations and Development Office (CReDO), conducted a household survey on the Subanon beneficiaries of the Certificate of Ancestral Domain Title (CADT) in Siocon, Zamboanga del Norte. The survey was pursued to gather baseline data on the enjoyment of certain social-economic rights of CADT Beneficiaries to serve as basis for revisions and adjustments of TVIRD's Social Development and Management Program (SDMP) for it to become more responsive to the needs of the stakeholders within the Ancestral Domain. The Company-paid teachers served as the Evaluators and were assisted by the TVIRD Subanon Scholars.

Initially, the household survey received negative feedback and perception by some of the CADT Beneficiaries due to their experience with the anti-mining NGO's in the past. They thought that the data they will give will just be used to their disadvantage. However, the Council of Elders extended their support to the survey and helped TVIRD in explaining to the Beneficiaries the importance of the activity in the development planning in their Ancestral Domain. Another challenge to the survey was the refusal of Elder Jose "Boy" Anoy to survey Paduan. He also raised the issue of the flawed CADT Beneficiaries List provided to TVIRD by the Siocon Subanon Association Incorporated (SSAI).

Despite these challenges, CReDO was able to implement the survey and the data gathered were very significant in the revision and redirection of SDMP thrusts for the Ancestral Domain.

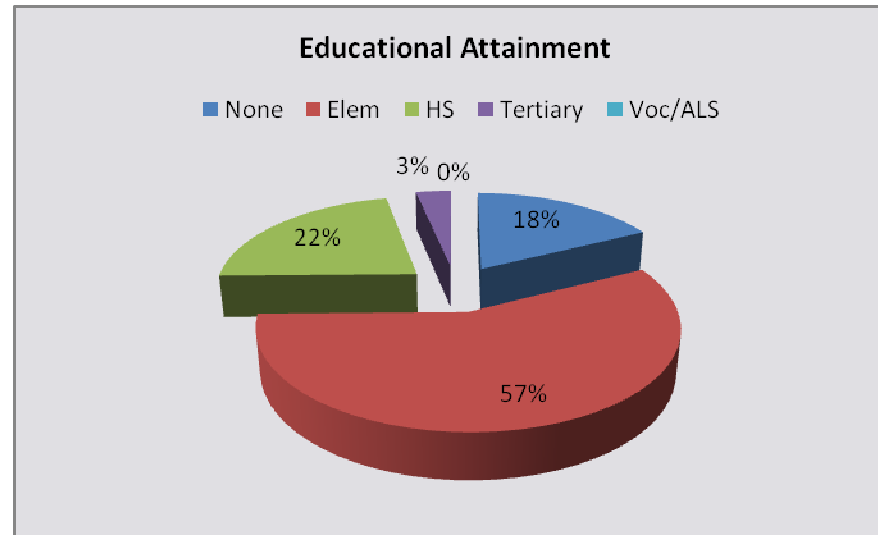

The CADT Beneficiaries

Based on the list of CADT Beneficiaries issued to the Council of Elders by the National Commission on Indigenous People, there are a total of 241 CADT Beneficiary households. This figure is equivalent to 1,144 individual CADT Beneficiaries. Only a total of 150 (62.24%) households (equivalent to 681 individuals) found to have been residing within CADT Area. From this figure, a total of 73 households (30%) - equivalent to 463 individuals (42%) - were surveyed. The CADT Beneficiaries residing in Paduan area were not surveyed due to the refusal of Elder Boy Anoy. There are a total of 27 households in Paduan which is equivalent to a total of 103 individuals.

A. CADT Beneficiaries by Household**B. CADT Beneficiaries by Individual**

Findings: Highlights

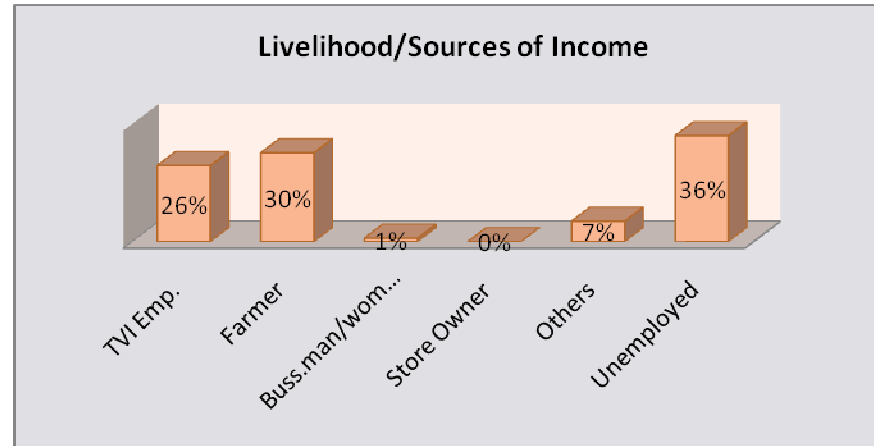

I. Education

- 18% of CADT Beneficiaries did not have their formal schooling.
- 57% of them reached elementary level.
- 22% of them reached secondary level.
- Only 3% of CADT Beneficiaries were able to reach tertiary education.
- No CADT Beneficiaries was able to attend/finish any vocational courses

At the time of the survey, no CADT Beneficiary was able to participate or attend any Alternative Learning System or technical trainings. However, on July, 2007, TVIRD launched and implemented the Functional Literacy Program for Adults and Out-of-School Youth in partnership with the Department of Education-Siocon District. Further, TVI conducted a Basic Electrical Workshop Training for the Subanon Youth. The Elementary and Secondary School built by TVIRD through the coordination with the Department of Education provided the Subanon an access to primary and secondary education.

2. Livelihood/Sources of Income

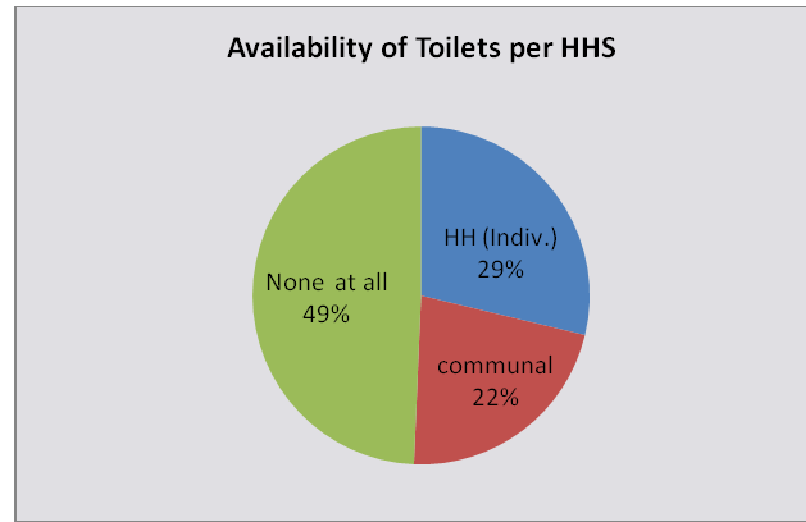

- 26% of the working population are employees of TVIRD
- 13.44% of CADT Beneficiaries are farmers
- 1% have their small business
- 36% CADT Beneficiaries considered themselves as unemployed

TVIRD, ensured that CADT Beneficiaries will be prioritized in the hiring of needed employees in the mine site. This year, the company has sat down with the Council of Elders to strengthen the system that will ensure the employment opportunity of the Subanon within the Ancestral Domain. On the other hand, those CADT Beneficiaries whose main source of livelihood is farming, TVIRD, through its Social Development and Management Program (SDMP), implemented the Agro-forestry and Model Rice Terrace Development to provide and transfer the technology on sustainable agriculture. Moreover, in the Third Quarter of 2008, TVI initiated the implementation of the Food Always in the Home Program (FAITH) to address the food security of the Subanons and serve as a source of additional income to them at the latter part of the program. TVIRD noticed the lack of entrepreneurial culture among the Subanon thus, the Skills-Livelihood and Investment Program (SLIP) was launched among with the other programs such as Microfinance and small-business management trainings.

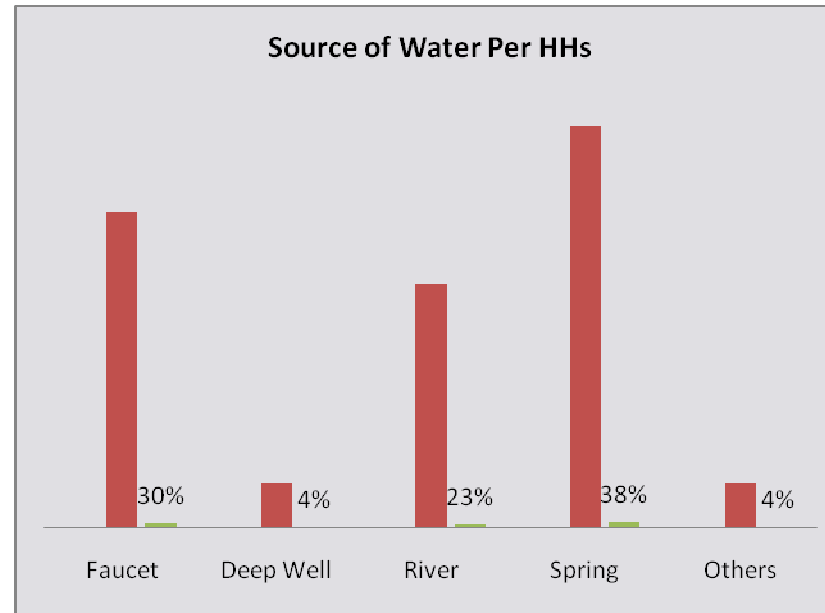

3. Health

A. Availability of toilets

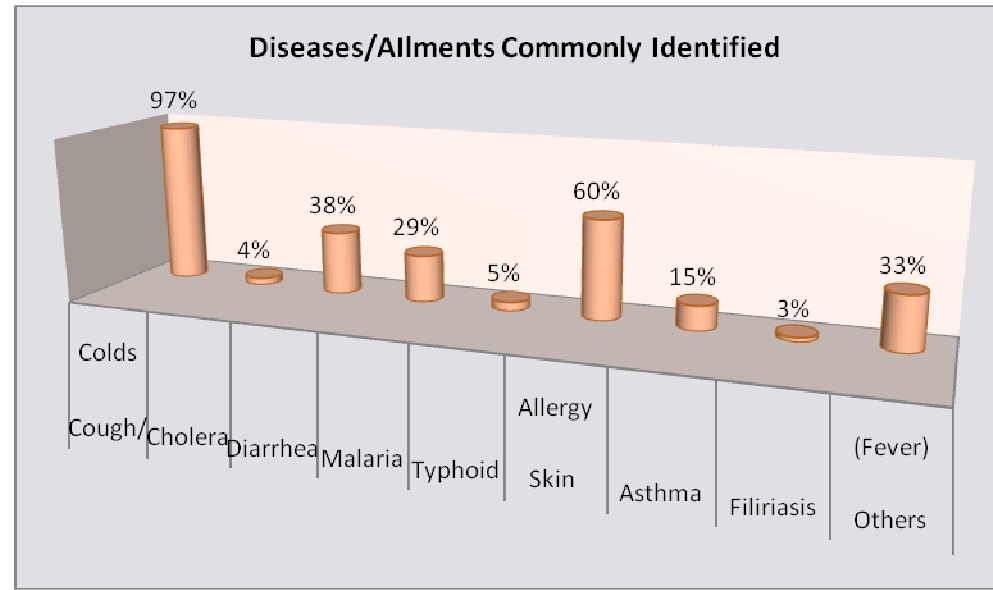

- 36 households or 49% of CADT Beneficiaries households have no toilet or don't have any access to toilet facilities.
- 21 households or 29% CADT Beneficiaries have their toilets.
- 16 households or 22% CADT Beneficiaries have access to communal toilets.

In response to this problem, TVIRD through CReDO has implemented considerable construction of communal toilets in different areas of CADT Beneficiaries such as in Solonsangan, Gulangan and Canatuan.

B. Source of Water for Drinking and Domestic Use

- 22 households or 30% have access to safe water through improved water system facilities (with tank/water reservoir).
- 31 households or 42% get their water in the spring.
- 17 households or 23% get their water in the rivers.
- 3 households or 4% get their water through deep well.
- Others 4%

The considerable number of CADT Beneficiaries who have access to safe drinking water through improved water system facilities are due to the Water System Project implemented by TVIRD through its SDMP.

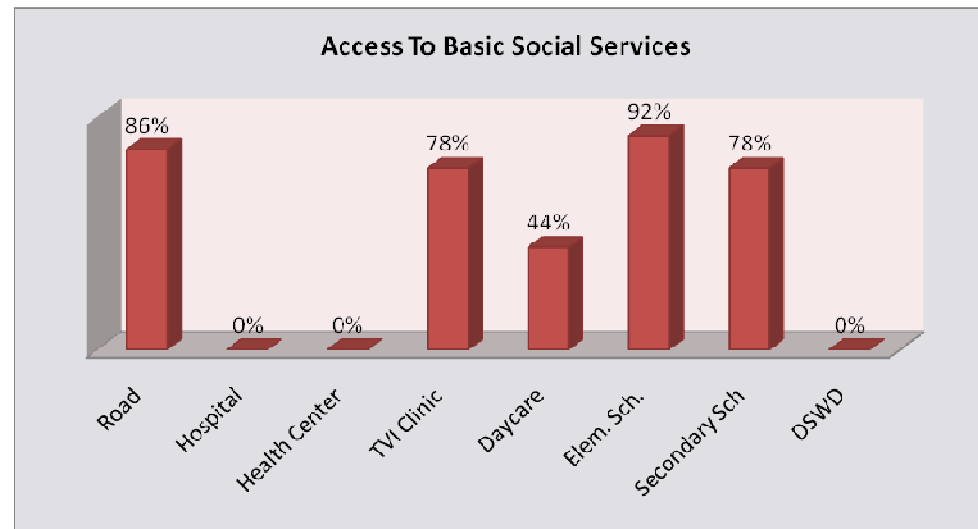

C. Common Diseases/Ailments

- 71 households or 97% identified cough/colds as the most common ailment.
- 3 households or 4.11% identified cholera.
- 28 households or 38.35 identified diarrhea.
- 21 households or 28.76% identified malaria.
- 4 households or 5.47% identified Typhoid
- 44 households or 60.27% identified skin allergy.
- 11 households or 15.06% identified asthma.
- 2 households or 2.74% identified Filiriasis.
- 33% Other diseases/ailments

Several medical missions were conducted by TVIRD in different areas of CADT Beneficiaries such as the general medical consultation, medical outreach for skin allergy (kerker), and nocturnal blood smear for Filariasis. Moreover, people from the community can immediately access the company clinic to avail medical services and medicines.

An independent health study was also conducted if toxic chemicals are affecting the health of the population. It was found out that no toxic chemical from the mine site is affecting the health of the population.

4. Access to Basic Social Services

- 63 households or 86% have access to paved road.
- All households have no access at all to Municipal Hospital
- All Households have no access at all to Municipal Health Center
- 57 households or 78% have access to TVI Clinic
- 32 households or 44% have access to Daycare Center.
- 67 households or 92% have access to elementary school.

- 57 households or 78% have access to secondary school.
- All households have no access at all to DSWD.

Based on the survey on access to basic social services, Gulangan has no access to all basic social services. However, through TVIRD and its implementation of SDMP, Gulangan started to have access to the different social services such as the Livelihood program through the Agro-forestry and Model Rice Terraces Development, health and sanitation services through medical missions and provisions of communal toilets.

Summary

Since TVIRD started its operation in Canatuan and implemented its Social Development and Management Program (SDMP), CADT Beneficiaries have gained considerable benefits from employment, education, basic health services and to many social services that have considerable impact to their lives. TVIRD continuously adjusts its SDMP to respond to the needs of the CADT Beneficiaries towards the development of the Ancestral Domain of the Subanons.

The household survey based on human rights standard will be conducted every two years to track the level of enjoyment and deprivation of certain economic, social, and cultural rights. The results are then used as basis for TVIRD's social program.
